

## ADDENDUM # 1

### LAMAR DIXON SOCCER COMPLEX

ASCENSION PARISH LOUISIANA  
Project No. 2015.0001 REC #13-001  
9039 St. Landry Ave.  
Gonzales, LA 70737

May 23, 2016

This bid addendum modifies the Construction Package for the Lamar Dixon Soccer Complex as follows:

#### Part 1: Contract Document Clarifications

1. Please find the attached updated Louisiana Uniform Public Work Bid Form "Unit Price Form". This form will replace the form in the specifications. Items that have been added are: Demolition and Asphalt Removal, Removal of Existing Gate and/or Fence, and Muck and Fill Ditches. Items that have been updated are: Installation and Maintenance of Erosion Control Plan and Tree Protection and Concession Building (100A-2P, 480V).

#### Part 2: Contractor Questions

1. **Q:** Can the 12" PVC pipe connecting the field drainage to the ditch be HDPE pipe so no special adapters will be needed?  
**A:** Yes
2. **Q:** There are two specifications of HDPE pipe. The AASHTO is specified as "Highway Approved" by state and federal DOTD. The ASTM pipe is for all other "non-highway" applications and is the majority of all pipe sold.?  
**A:** Any drainage related to the roadway would require the specified AASTO.
3. **Q:** Is HDPE approved as an equal to the Contech A2000 Ultraflow pipe connecting the ponds?  
**A:** No
4. **Q:** The pipe detail on 9 of 32 shows an 18" wide trench. Does this apply to both 10" and 12" collector drains?  
**A:** An 18" wide trench would be appropriate for a 12" collector pipe. A 16" wide trench would be allowed for a 10" collector pipe.
5. **Q:** Please clarify the difference between Ref No. 19, 21, 34 on the Unit Price Form. You have Fine Grading (Soccer Fields B-G), Final Laser Grade (Soccer Fields B-G), and Fine Grading?  
**A:** "Fine Grading (Soccer Fields B-G)" would be the initial grading required to bring the field subgrades to the proper elevation prior to the base laser grading. That is to be performed to prepare for the sand base. The "Final Laser Grade (Soccer Fields B-G)" would be the final grading that would take place on the soccer fields after the sand base is installed and prior to sprigging. Item 34 "Fine Grading" is referring to the roadway grading.

6. **Q:** What is the contract days or what is the project duration?  
**A:** 180 days
  
7. **Q:** What are the liquidated damages?  
**A:** Please refer to 3.3 in the contract, "Contractor shall pay owner the amount of five hundred (\$500) dollars for each day that expires after the time specified in Paragraph 3.1.
  
8. **Q:** On page 12, will the GC or PRC be responsible for removing and recycling materials?  
**A:** The general contractor will be responsible.
  
9. **Q:** Can the 3" lateral pipe be solvent weld instead of gasketed?  
**A:** Yes lateral lines would be OK as Solvent Weld. Just not the mainline.
  
10. **Q:** Please confirm that the subgrade under the sand rootzone needs to have a 98% standard proctor compaction (Section 32 80 00 - 11). This would have to be supplemented with lime or fly ash to reach this compaction level?  
**A:** The subgrade compaction for the soccer fields should be 85%.
  
11. **Q:** If, due to rain or other uncontrolled events, the sprigging date is pushed back beyond September 15, can we overseed with Rye and then sprig the following May-June?  
**A:** Yes, we will have to evaluate our timeframe. Our primary goal/option would be to sprig in the fall but if we are pushed beyond the appropriate timeframe to sprig that we are comfortable with we will look to our secondary option which would be to overseed with rye and then sprig in the spring.
  
12. **Q:** On page 32 92 00-6, under calcium soil conditioner, Dolomitic Limestone and encapsulated gypsum are listed. On page 32 80 00-8, Dakota peat mix is being used as a soil amendment. Are we to use the limestone and gypsum along with the peat? Also, humic acid, another soil amendment is being specified under "Fertilizer". Please clarify.  
**A:** Soil test will determine if the lime or gypsum is necessary after the peat has been blended. In this case the humic acid is for plant growth not necessarily to amend the soil.
  
13. **Q:** Are the contractors responsible for paying for sand, gravel, and amendment testing? Are the contractors responsible for paying for the compaction tests? Article 13, page 000700-52 states the Owner will pay for tests except for inspections and tests in 13.03.C and D. Does the testing above fall under the contractor's responsibility?  
**A:** When referencing the soccer fields, the contractor will be responsible for the sand, gravel, and amendment testing. We feel that the compaction should not be an issue since 85% is appropriate.
  
14. **Q:** Sprigging machines are heavy and weighted-down with sprigs and have gotten stuck as soon as they enter the rootzone. Can we have the option to hand-sprig?  
**A:** It can be a challenge but it can be done. The fields need to be rolled immediately and the moisture content of the sand should be very high during the process. Hand sprigging would be allowed but the contractor will still need to plant the required amount and in a timely manner.
  
15. **Q:** Will there be any line items for demolition, tree protection, asphalt removal, muck and fill ditches, gate removal, or telephone box relocation?  
**A:** Please see the updated bid form. We do not see the need for a telephone box relocation

16. **Q:** Is there a detail for the catch basins for the RCP pipe?  
**A:** Please see the index to standard plans on the cover sheet of the drawings. Can also be located on the DOTD website.
17. **Q:** What type of seeding will be required?  
**A:** Hydroseed with Bermuda-Rye mix.
18. **Q:** Under Earth Moving, there's specs on warning tape and detectable warning tape. Under irrigation, there's no mention of warning tape. Is the irrigation contractor required to place warning tape on any or all the pipes in the irrigation system?  
**A:** No
19. **Q:** Can we add temporary culverts during construction to access pond?  
**A:** Yes
20. **Q:** On page 32 80 00-5, the subgrade tolerance is +/- 1/2". On page 32 80 00-11, the subgrade tolerance is +/- 1". Please clarify.  
**A:** The subgrade tolerance is +/-1/2"
21. **Q:** How are we to address the removal of the existing weeds on the fields?  
**A:** The field areas are to be sprayed with roundup and then bush hog it down after a week. The vegetation will need to be pulled off the field and depending on the density of the areas they may require discing.
22. **Q:** Has there been soil testing performed on dirt that is to be used from the pond area?  
**A:** Please see the soil cement determination testing in the specifications.
23. **Q:** On page 32 80 00 -2, line 5 states that Bermuda King or approved equal is to be used for sprigging. Plans call for Celebration. Please clarify.  
**A:** The proposed turf grass is to be Celebration Bermuda
